DATA SOURCES:
Coastline, creeks and lakes were digitised from a georeferenced SPOT image, captured December 22, 1994.
Contours were derived from Airborne Synthetic Aperture Radar (AIRSAR) data, captured August 16, 2001.
Mountain spot elevations were estimated from the highest contour, except for Mt Waite for which the spot elevation was obtained from the Tasmanian Survey Control Database.
Wildlife data was provided by the Australian Antarctic Division and the Parks and Wildlife Service, Tasmania.
The inclusion of wildlife data does not imply that this information is complete.
Place names sourced from Placenames Tasmania except for those in inverted commas which indicate informal names.

CAUTION: Absence of the depiction of hazards including steep terrain, cliffs, rockfalls, featherbeds, wave surges and strong undercurrents does not necessarily indicate a hazard free area.

True, Grid and Magnetic North are shown diagrammatically for the centre of Macquarie Island. Magnetic North is correct for June 2024 and moves easterly by about 0.19° each year.
